

COMMON FAQ's:

How much is it? We have a number of affordable programs.... starting at only \$5.85/sq ft installed! However, to give you a *precise* estimate a Product Specialist will come out and take a look at the specific area you're interested in to be able to give you an *accurate* estimate as well as any options and alternatives. We'll bring you various grass samples to select from and will be able to provide your estimates accordingly.

Does it get HOT? Yes, it can get warm if it is in direct sunlight but not hot enough to burn you. If you are planning an activity simply spray with water to take the temperature down. Our Product Specialist will also explain to you about the use of EmeraldFill which will also reduce the temperature if it is a concern.

How does it get installed? It's a fairly simple process actually....first, we will excavate the installation site 3-4 inches down (if necessary), lay some permeable cloths to combat weeds and the like, fill back up with a road base or decomposed granite material to form your design and then we lay the turf, secure it down, power broom in your infill....and that's pretty much it! Simple.

How long does it take to install? Installation timelines depend on the install site itself; ie: ease of access?, tree roots?, rock removal?, size of installation area?, etc. However, in most cases the installation process will only take 1-2 days for an average size lawn.

How long will the turf last? With proper installation you should realize a good 10-15 years of useful life!

What kind of warranty do you give? You get an unprecedented 15-year installation warranty!
